

Internship Opportunities | Draper, Ogden & St. George, UT and Boise, ID

Bowen Collins & Associates offer internships year-round for motivated students to join our team. We are a water and wastewater engineering firm who provide unique and innovative water-based solutions to cities and special service districts in Utah and Idaho. We know water, we are passionate about water, and we work as a team to design and deliver water-related solutions to our clients. We see the benefit of hiring diverse people from various backgrounds, and we understand the value of fostering a workplace in which inclusion, understanding, and individuality lead to a strong work culture.

As a BC&A intern, you will have the privilege of developing valuable job skills while continuing your education. You will be asked to work on real world issues in your community, visit active construction sites, be involved in technical trainings, have access to professional growth activities, and perform a variety of water and wastewater-based engineering tasks. You will have daily opportunities to experience meaningful work in your area(s) of interest, and you will have access to new relationships and fresh feedback from people who have worked in the industry for years.

Candidates should be working toward a degree in water/environmental engineering, environmental science, construction management, or related fields. Interested candidates should send a resume that includes a short paragraph of your professional objective to jobs@bowencollins.com and we will be in touch.
